I'm Ritesh Singh Sohlot, an Android architect with over seven years of experience building mobile products from scratch in fast-paced startup environments. I've led full cycle development from ideation to CI/CD and built three apps, including one for my own startup. That journey taught me how to build with clarity, avoid costly mistakes, and make smart trade offs under pressure.

As an experienced Android developer, I've built and maintained production apps using Jetpack Compose to deliver intuitive and motion-rich UIs. I'm proficient in Kotlin, Java, and clean MVVM architecture with deep experience in coroutines, Retrofit, OkHttp, and lifecycle-aware components. I've applied CI/CD practices using Jenkins, to ensure consistent delivery with robust quality standards. I've also implemented cloud messaging APIs and push notifications to drive engagement across high-traffic platforms.

Work, for me, is more than just a paycheck it's something I genuinely love and find purpose in. I'm a quick learner and a dedicated worker when the mission resonates. I take pride in mentoring teams, upholding code quality, and owning the full app lifecycle from ideation through release and long-term maintenance. If the team feels aligned, I'm ready to jump in right away and start contributing.

Thank you for considering my application. I'd welcome the chance to discuss how I can contribute to your team.

Best Regards,

Ritesh Singh
